

C++ primer P94 练习3.17

```
#include <iostream>
#include <string>
#include <vector>
using namespace std;
int main(){
    vector<string> vec;
    string str;
    while (cin >> str){
        vec.push_back(str);
    }
    for (auto &s : vec){
        int j = 0;
        while (j<s.size()){
            s[j]=toupper(s[j]);
            j++;
        }
        cout << s << endl;
    }
    return 0;
}
```
